

- Key
- Previously sampled locations with less than 0.12 µg/L 1,4-dioxane
  - Previously sampled locations with greater than 0.12 µg/L 1,4-dioxane

- Notes
1. Except as noted, samples were collected from untreated well water and analyzed by EPA Method 522 for 1,4-dioxane.
  2. Sampling was conducted during the week of May 16, 2022.
  3. Potential sampling area is identified by green shading.
  4. Analytical results above detection limits and sampling dates shown in red. "J" values are estimated.
